

Configuration Requirements

This project exposes integration/runtime configuration in **Platform Admin** - > **Platform Settings**. For the keys in this document, changes are restricted to users with the `super_admin` role.

1) Map Integration (Google Maps)

Required to enable geocoding/location workflows:

- `integrations.google_maps.api_key`

Notes:

- Must be a valid Google Maps API key with geocoding access enabled.
- Runtime target: `services.google_maps.api_key` .

2) OTP Integration

Required to enable OTP verification flow:

- `otp.expire_minutes`
- `otp.max_attempts`
- `otp.lock_minutes`
- `otp.mail_subject`

Notes:

- OTP delivery currently uses email.
- Runtime targets:
 - `auth.otp.expire_minutes`
 - `auth.otp.max_attempts`
 - `auth.otp.lock_minutes`
 - `auth.otp.subject`

3) Stripe Integration

Required to enable payments and connected account operations:

- `stripe.secret_key`
- `stripe.publishable_key`
- `stripe.client_id`
- `stripe.redirect_uri`
- `stripe.currency`
- `stripe.connected_account_country`

Strongly recommended:

- `stripe.webhook_signing_secret`
- `stripe.dashboard_base_url`

Notes:

- Runtime targets:
 - `stripe.api_keys.secret_key`
 - `stripe.api_keys.publishable_key`
 - `stripe.client_id`
 - `stripe.redirect_uri`
 - `stripe.webhook_signing_secret`
 - `stripe.currency`
 - `stripe.connected_account_country`
 - `services.stripe.dashboard_base_url`

4) Email Integration (SMTP / Mailer)

Required for OTP and outbound transactional emails:

- `email.mailer` (typically `smtp`)
- `email.from.address`
- `email.from.name`

Required when `email.mailer = smtp` :

- `email.smtp.host`
- `email.smtp.port`

- `email.smtp.username`
- `email.smtp.password`
- `email.smtp.encryption` (`tls` , `ssl` , or `empty`)

Notes:

- Runtime targets:
 - `mail.default`
 - `mail.mailers.smtp.host`
 - `mail.mailers.smtp.port`
 - `mail.mailers.smtp.username`
 - `mail.mailers.smtp.password`
 - `mail.mailers.smtp.encryption`
 - `mail.from.address`
 - `mail.from.name`
